PROJECT

Smart Inventory

Final year Project – International Islamic University Malaysia (IIUM)

Oct 2024 - June 2025

- Designed and developed a full-stack Laravel-based web application with autonomous features to manage and monitor inventory in a medium-scale business.
- The system offers an authentication system with (RBAC) roles-based access control, supplier management, financial analysis and a real-time tracking system.
- Integrated a barcode scanner via API to handle purchase processes.
- Technologies used in the development : Laravel(PHP), MySQL, Javascript, HTML/CSS, Bootstrap and API.
